

Intel® Server Management

Systems Management that Harnesses Expertise

The ability to focus is a powerful skill in the hands of a leader. Choosing where to focus your business is imperative for your success. Intel® Server Management allows you to concentrate on your core business while leveraging the expertise of Intel. Our powerful suite of integrated tools provides comprehensive systems management that supports many of the key business functions of your customers. It monitors pivotal hardware components and the utilization of system resources and processes around the clock, helping alert you of problems before they can interrupt operations. Customizable with your brand and feature preferences, Intel Server Management enables you to increase your competitive advantage by offering new products and service. By wisely utilizing the expertise inside and outside of your company you can focus on what's important — your business, your customers and the success of both.

The New Reality

The convergence of information and the demands it places on servers used to be reserved for the enterprise. Today, small and medium businesses are facing the same challenges. The proliferation of business critical information and processes increases the demand on servers. Uninterrupted access to business applications is as essential as electricity. Servers must be available for business functions and they must perform optimally for those functions to occur profitably.

In this new reality, servers require a new level of support. And while they relate to enterprise level solutions, customers desire alternative solutions.

Customers today need systems for IT support—systems that help manage data back up, power surges and failures, server redundancy and monitoring. Customers need systems for business operations support—systems that help manage applications, server bandwidth, server stability and performance.

Customers need a solution and you can help provide it.

Intel Server Management brings systems management out of hardware management and into the management of essential business functions enabling you to elevate your offering.

Building Business

Intel Server Management brings a comprehensive suite of tools encompassing both hardware and software for complete systems management. It provides you immediate entry into the market segment without the need to build your own custom solution. Intel Server Management brings systems management out of hardware management and into the management of essential business functions enabling you to elevate your offering. Intel Server Management offers your customers greater reliability and enables you to expand your post-sale management services offerings.

A key component in the suite is the Intel® Server Manager. It allows you to monitor hardware faults, in addition to the operating system and ongoing operations management. Intel® Deployment Toolkit provides the software tools needed to set up your server and its initial configuration. With the Intel Deployment Toolkit you can easily configure server hardware and utilize tools to update the field replaceable unit and sensor data record information. You can also save, restore, and set selected system firmware and BIOS settings. It also includes key tools like the Intel® Express Installer and the Intel® Server Maintenance and Reference Training (SMaRT) Tool.

This suite of tools is specifically designed for Intel® Server Products and is scalable across the entire product line. Intel Server Management provides an optional feature that allows remote access to manage your customers' servers from remote locations. And when your customers are ready to upgrade, they have a clear path to management suites such as LANDesk® Server Manager* among others.

Supporting Business

Your customers need to focus on their business not their technology and Intel Server Management gives them that freedom. It supports business uptime through the management of power failure recovery, hardware component failure, redundancy and operating system monitoring. It manages operational issues such as application accessibility, server bandwidth monitoring, server stability for availability, and performance monitoring for optimization.

And the best part—it's easy to use. Intel Server Management has a redesigned intuitive web-based server management admin console from which you can easily execute program monitoring functions, group operations, identify assets, solicit reports and track activity to tune your data center to your preferences.

Right for Business

Every size business has knowledge and processes that are critical to success. Intel Server Management supports business with a comprehensive suite of tools to help keep your customers' business running, their processes optimized and their data captured and stored. With Intel Server Management you can manage the whole server for comprehensive IT and business operations support. Harness our knowledge as well as your own; offer your customers the right solution for business—**Intel Server Management.**
